

AIRBNB NEW YORK

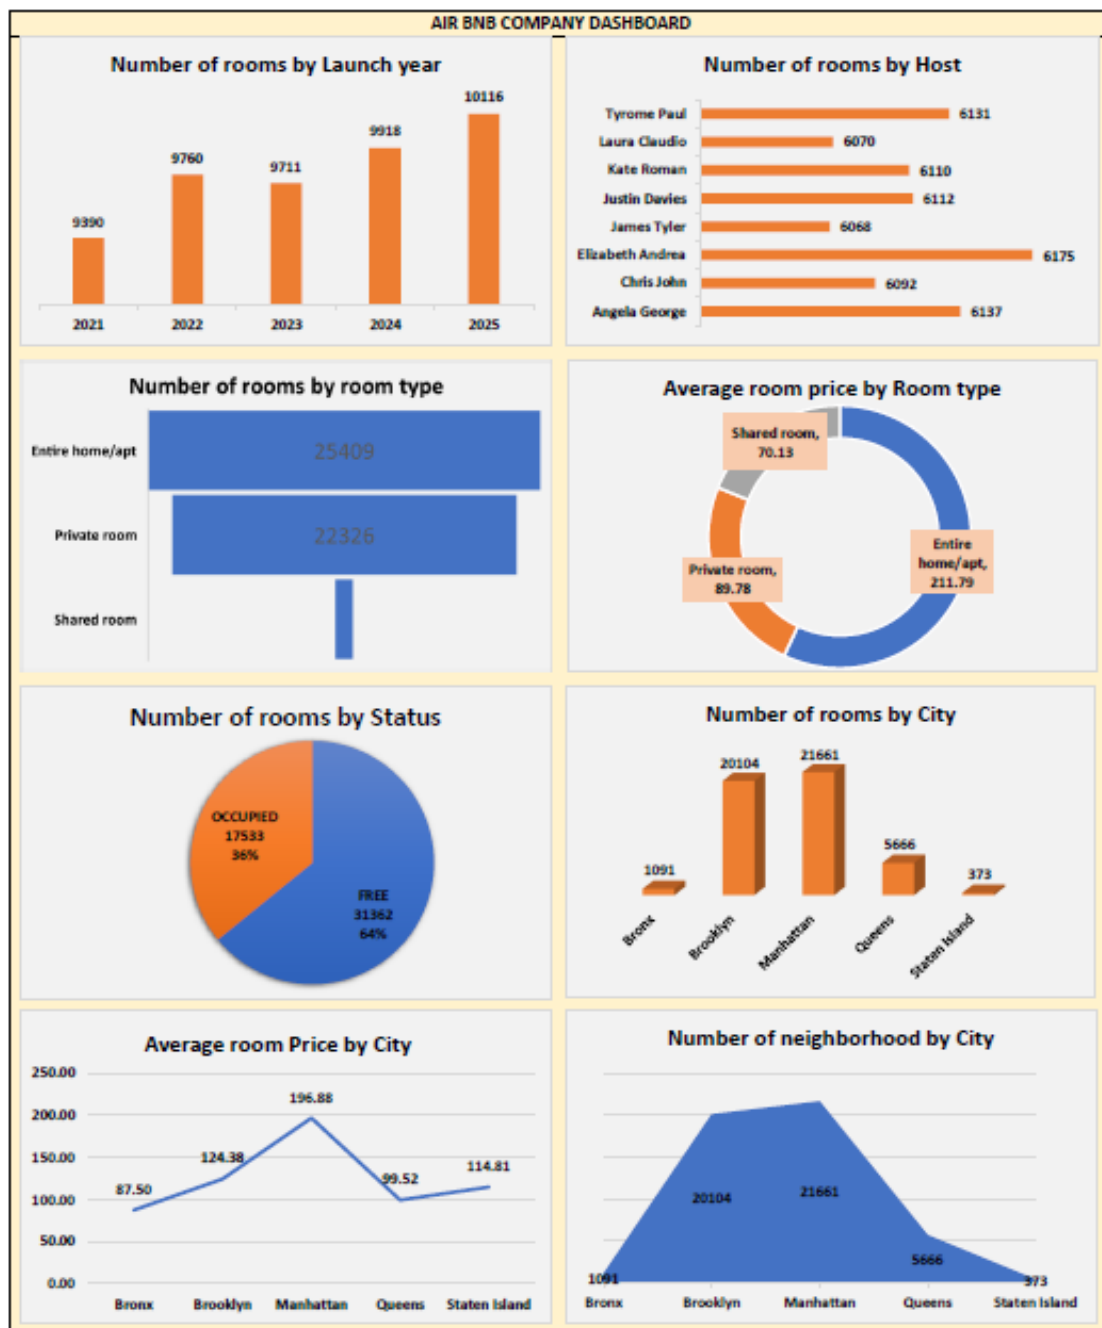

Excel Data Analytics Report

PROJECT OVERVIEW

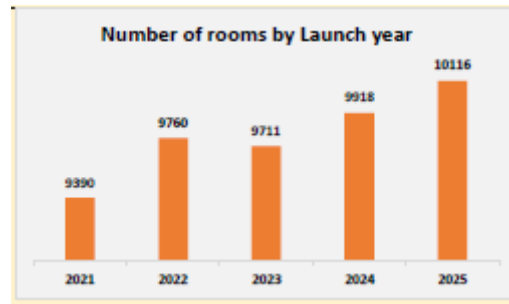

Airbnb currently operates 48,895 rooms listings across New York City. Below contain the findings through an interactive Excel dashboard across 5 years (2021 - 2025).

DASHBOARD

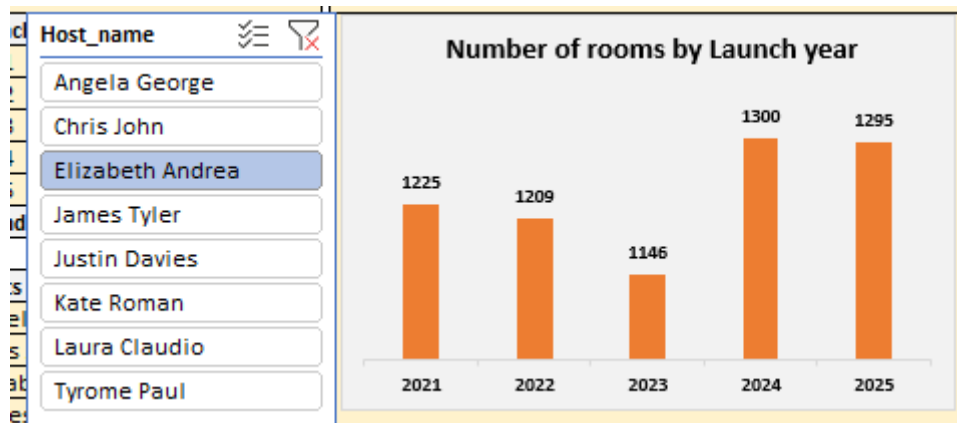

A dashboard was created using excel information.

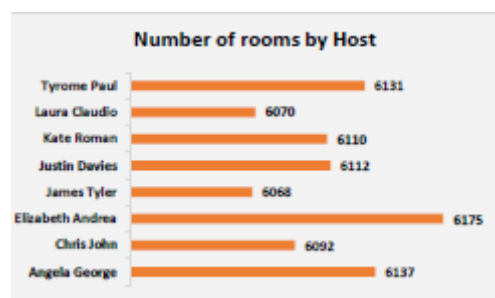

DEDUCTIONS

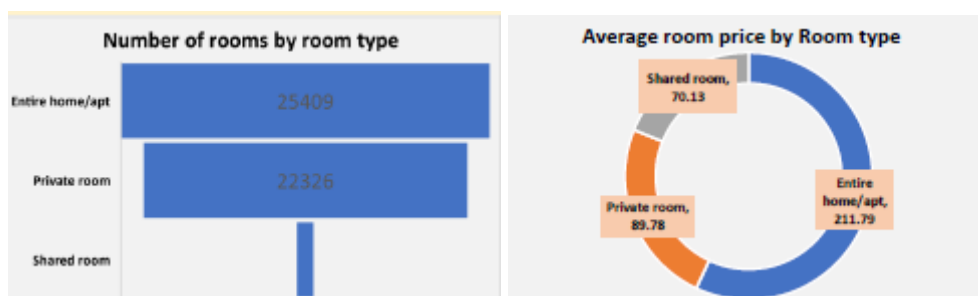

There is significant growth in the booking of the rooms across the years except the deep across 2023.

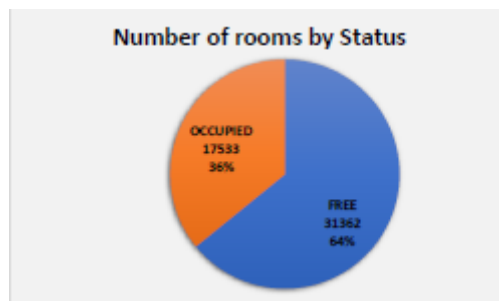

After further analysis, we were able to deduct Elizabeth Andrea had a noticeable drop in hosting for the year 2023.

More clients tend to book when Elizabeth Andrea is hosting compared to Laura Claudio and James Tylor with low rooms managed.

Clients tends to book an entire home (Apartment) often because of their privacy and when it comes to price, booking an entire home is most expensive.

There are more free rooms compared to occupied rooms.

Manhattan and Brooklyn have highest population since neighborhood is proportional to population, the same as providing enough rooms in the cities.

Manhattan and Brooklyn command the highest average prices and the Bronx has the lowest average room price of the five cities.

RECOMMENDATIONS

Entire home/apt and Private room are the two dominant room types by volume which more focus will yield profit.

More marketing strategies to reduce the presence of free rooms.
